

Construction of a project monitoring application iteratively and incrementally

MMT – A metrics Monitoring Tool

- A tool for providing statuses and metrics of projects
- Especially for student's project and helping on teaching project management
- Used by the project members, project managers, clients and the supervisors (teacher)

Building and evaluating

- Developed by the students of the Project work course at University of Tampere during the years 2014-2017
- Part of the Mäkiäho's PhD work (teacher at the course)
- A new project group was formed each semester to build a new version
- The versions were tested, taken to use and evaluated
